- **Transapp** is a digital platform for public transport authorities and operators.
- We already power public transport information systems at scale in Latin America.

Includes Built-in fleet management, arrival prediction and passenger communication tools

Who we are

A Latin American startup building scalable digital infrastructure that helps people trust, choose, and use sustainable public transport every day.

What we are looking for

We are looking for pilot projects, strategic partnerships, and deployments that turn clean mobility investments into daily public transport use.

What we do

We integrate public transport data into real-time passenger information, trip planning, fleet visibility, operational KPIs, and communication tools

Why it matters

We help cities make zero-emission fleets visible and easier to choose, turning clean investments into better passenger adoption.
